

The Digital Marketing Ecosystem

The complete beginner's guide,
with examples from Mauritius

Avinesh Bundhoo & Fareez Fawdar · Oreegami Mauritius · October 2026

Inside this guide

- 1 What marketing is
- 2 From traditional to digital
- 3 Why marketing matters
- 4 The Mauritius digital landscape
- 5 Digital marketing & AI in 2026
- 6 The consumer journey
- 7 Paid, owned and earned media
- 8 The channels and tools
- 9 Business objectives come first
- 10 Objectives and market position
- 11 SMART objectives
- 12 KPIs: measuring what matters
- 13 KPI formulas and the maths
- 14 Exercises
- 15 Glossary and checklist

PART A

Foundations

What marketing is, how it went digital,
and why it matters

SECTION 1

What marketing is

Before we talk about Google, Facebook or AI, we need a clear idea of what marketing actually is. Many people think marketing means "advertising" or "posting on social media". Those are only small parts of it.

In simple terms

Marketing is the process of getting people interested in a company's product or service, and turning that interest into sales and loyal customers. It involves understanding who the customer is (market research), deciding how to reach them (strategy), and shaping the offer itself.

The official definition (American Marketing Association): marketing is the activity, set of institutions and processes for creating, communicating, delivering and exchanging offerings that have value for customers, clients, partners and society at large.

Notice the key word: **value**. Good marketing doesn't trick people into buying. It finds what customers value, builds an offer around it, and communicates it clearly.

The 4 Ps of marketing

The classic framework to design any offer is the **marketing mix**, or 4 Ps. Every marketing decision falls into one of them.

P	Question it answers	Example: a bakery in Rose Hill
Product	What do we offer? Goods, services or ideas of value	Birthday cakes, bento cakes, gâteaux piments for events
Price	What does the customer pay?	Rs 1,200 for a bento cake; Rs 3,500 for a 2 kg birthday cake
Place	Where and how does it reach the customer?	Shop counter, WhatsApp orders, delivery in Plaines Wilhems
Promotion	How do we communicate the value?	Instagram reels, Google Maps profile, Facebook ads before Mother's Day

For services (hotels, banks, training, restaurants), marketers often add three more Ps to make the **7 Ps**: **People** (the staff who deliver the service), **Process** (how the service is delivered: booking, waiting time, payment) and **Physical evidence** (what the customer can see: the shop, the website, reviews, the uniform).

Tip: when a campaign doesn't work, check all 4 Ps before blaming the ads. Often the problem is the price, the product or the place (for example, no easy way to order online).

SECTION 2

From traditional to digital marketing

Before the internet, marketing relied on **mass media**: broadcasting one message to a very wide audience and hoping the right people saw it.

From traditional to digital marketing

What changed when marketing moved online

Traditional marketing: how it worked

Characteristic	What it meant
One-way communication	Pure broadcasting: the audience couldn't answer, comment or ask questions
Broad audience targeting	It reached everyone, not necessarily the right people
High production costs	TV spots, print runs and agency fees needed large budgets
Hard to track ROI	You rarely knew which advert brought which customer

Traditional media hasn't disappeared. In Mauritius, radio, newspapers and billboards are still part of many campaigns. But they are now one part of a bigger, mostly digital system.

What digital marketing is

Digital marketing uses online channels to reach the right customer with the right message. Unlike traditional media, every step can be measured, targeted and adjusted.

Advantage	What it means	Example
Measurable	Impressions, clicks, conversions and return on investment are tracked in real time	You know that a Rs 10,000 Facebook campaign brought 25 orders
Targeted	Reach people by intent, behaviour, location and interests, not by guessing	Show an ad only to people in Curepipe who searched "wedding cake"
Adaptable	Test, learn and change a campaign while it runs	Pause the ad that doesn't work on day 3 and put the budget on the one that does

The real change is the **two-way conversation**: customers comment, review, share, message and compare. Brands that listen and respond win; brands that only broadcast lose attention.

SECTION 3

Why marketing matters

Marketing is the bridge between what a business offers and what a customer values. It turns attention into trust, and trust into growth.

Value	What marketing does
Value creation	Translates a product into a real benefit a customer is willing to pay for
Brand visibility	Earns attention so the right people see you at the right moment
Customer insight	Listens to behaviour, needs and complaints: the raw material of better products
Demand generation	Turns interest into intent: enquiries, leads and a steady flow of new customers
Trust and authenticity	Builds credibility, which decides who customers buy from again
Sustainable growth	All of the above compound: marketing is how a brand grows beyond its first customers

In Mauritius: the market is small and word travels fast. One bad experience shared in a Facebook group can reach thousands of people in a day, and one great review can bring a steady flow of customers. Marketing here is as much about reputation as about advertising.

PART B

The market

The Mauritius digital landscape
and the trends shaping 2026

SECTION 4

The Mauritius digital landscape

Every campaign in Mauritius rests on one fact: this is a **highly connected, mobile-first market** with fast-growing digital payments and online shopping.

Mauritius: a mobile-first, connected market

Key figures, late 2025 to early 2026

Sources: DataReportal Digital 2026 Mauritius · Statcounter (Mar 2025–Mar 2026) · Statista via trade.gov

Figures as presented in class (late 2025 – early 2026).

What the numbers mean for marketers

- **Mobile first.** There are more mobile connections than people, and almost all are on 3G, 4G or 5G. Every website, ad and email must work perfectly on a phone.
- **Facebook is the main social platform** (886K people reachable with ads, about 70% of the population), with Messenger close behind. Instagram (418K) is smaller but growing faster, especially with younger audiences.
- **LinkedIn is big for B2B:** 630K members, about 61% of adults, growing quickly. Useful for recruitment, training, professional services and B2B sales.
- **Search means Google.** With about 92% of searches, almost every search conversation in Mauritius happens on Google.
- **Digital payments are accelerating.** Internet banking reached about Rs 874 billion in value (July 2025, +20% in 13 months) and mobile banking transactions grew about 27% in a year, to 12 million. Customers are increasingly ready to pay online.
- **eCommerce is growing steadily:** projected around US\$396 million in 2025, rising to about US\$481 million by 2030.

Platform reach in Mauritius

Platform	Ad reach / audience	Share of population	Growth (1 year)
Facebook	886K	69.9%	+5.3%
Messenger	599K	47.2%	+1.8%
LinkedIn	630K members	60.8% of adults	+16.7%
Instagram	418K	33.0%	+9.2%
Google (search share)	91.76% of searches		Bing 6.81% · Yahoo 0.57%

Sources: DataReportal Digital 2026 Mauritius (Meta and LinkedIn advertising tools) · Statcounter, March 2025 – March 2026 · Statista and Bank of Mauritius, via the International Trade Administration (trade.gov).

In Mauritius: people switch between English, French and Kreol, often in the same sentence. Successful local brands write ads and posts in the language their audience actually uses, and many mix languages on purpose. WhatsApp and Messenger are also where a lot of customer service and ordering happens.

Ad reach is not the same as users. Platforms count accounts that ads can reach; one person can have several accounts, and some accounts are businesses. Use these numbers to compare platforms, not as exact head counts.

SECTION 5

Digital marketing and AI in 2026

According to Deloitte Digital and Think with Google, five shifts are redefining how brands grow and compete.

Key figure	What it means
60% of consumers	say social content, recommendations or communities influence how they discover brands
43% of brand interactions	are perceived as personalised: there is still a big trust and relevance gap
83% of consumers worldwide	use Google and/or YouTube daily: the main discovery engines

Sources: Deloitte Digital, Marketing Trends 2026 · Think with Google / Ipsos.

The five shifts

Shift	What it means for you
1. AI becomes the marketing operating system	Generative AI now produces customer-ready work. Teams move from experiments to automated workflows (Weeks 13–14).
2. ROI and the end of blind spending	Finance directors want proof. Marketers who speak in revenue, cost per customer and customer value get the budget.
3. Trust and authenticity become assets	In a world full of AI content, brands that keep their promises earn loyalty.
4. Discovery becomes conversational	People ask AI tools questions. Brands need clear, trusted content that AI can quote (Generative Engine Optimisation, Week 3).
5. Personalisation and participation rise	Audiences want to co-create, remix and take part: brands build communities, not just campaigns.

Tip: this programme follows these shifts: you will learn the fundamentals first (Weeks 1-4), then the paid channels (Weeks 5-10), then data, AI and automation (Weeks 11-16), and finally strategy and leadership (Weeks 17-20).

PART C

Journey & channels

How customers decide, and the channels
that reach them at each step

SECTION 6

The consumer journey

Customers rarely buy the first time they see a brand. They move through stages, and each stage needs different messages and channels. Mapping this journey is the starting point of every digital plan.

The consumer journey

Four stages, and the channels that work best at each

Each stage in detail

Stage	The customer is...	Your job	Typical KPIs
Awareness	Discovering that a brand or solution exists	Be seen by the right people; make a memorable first impression	Reach, impressions, video views, brand searches
Consideration	Comparing options, reading reviews, asking friends	Answer questions, show proof, stay top of mind	Website visits, time on site, engagement, leads
Conversion	Ready to buy, book or sign up	Remove friction: clear price, easy payment, fast reply	Conversions, conversion rate, cost per acquisition
Loyalty	A customer who may buy again and recommend you	Delight, reward and stay in touch	Repeat purchase rate, reviews, referrals, lifetime value

A Mauritian example: a family car

Stage	What happens	Channels
Awareness	A couple in Moka sees a YouTube video and a Facebook ad for a new family SUV from a local dealer	YouTube, Facebook / Instagram ads, billboard on the motorway
Consideration	They google "best family SUV Mauritius price", read reviews and visit the dealer's website	SEO, Google Search ads, website, reviews, retargeting ads
Conversion	They book a test drive through a WhatsApp link and agree on financing	Landing page, WhatsApp Business, sales team, bank partner
Loyalty	They receive service reminders, a satisfaction survey and a referral offer	Email, SMS / WhatsApp, CRM, Google review request

Tip: the journey is not always a straight line. People jump back and forth between stages, and one strong review or one slow WhatsApp reply can win or lose the sale. That is why every channel must work together.

SECTION 7

Paid, owned and earned media

Every brand uses three types of media. High-performing brands don't choose one: they combine all three as a single system.

Paid, owned and earned media

Three types of media, one integrated system

1 · Paid media: the fastest lever

Media a brand pays for to drive reach, traffic, leads or sales.

Channel	What it does	Mauritian example
Google Search ads	Captures people at the moment they search	A car rental company appears for "car rental airport mauritius"
Meta ads (Facebook, Instagram, Messenger)	Precise targeting by interest, age, location and behaviour	A gym in Quatre Bornes targets women aged 25–45 within 10 km
LinkedIn ads	Targeting by job, company and industry	A training company targets HR managers
YouTube and video ads	Brand-building reach with measurable views	A telecom operator launches a new fibre offer
Display and programmatic	Banners bought automatically across many websites and apps	A bank retargets people who visited its loan page
Sponsored content and influencers	Paid placements with creators and publishers	A restaurant pays a local food creator for a video review

Strengths: fast reach, precise targeting, scalable, measurable. **Limit:** it stops the moment you stop paying, and costs rise with competition.

2 · Owned media: the assets you build

Channels the brand controls directly. They grow in value over time and generate **first-party data** (information your customers give you directly).

Channel	Role
Website	Your digital headquarters: every campaign lands here
Blog / content hub	Articles and guides that answer customer questions and bring free Google traffic
Email database	A direct line to people who opted in: usually the highest-return channel
CRM and automation	Personalised messages based on your own customer data
Mobile app	A permanent spot on the customer's home screen (banks, telecoms, retailers)
Brand social pages and WhatsApp Business	Your voice and community; direct conversations with customers

Strengths: full control, brand consistency, long-term value, first-party data. **Limit:** it takes time to build an audience. Note that social pages are "rented land": the platform controls who sees your posts.

3 · Earned media: the most trusted

Visibility you earn through others: what people say about you when you are not paying.

Form	Example
Press coverage	An article in a local newspaper about your new product or your community project
Word of mouth	A friend recommends your restaurant in a family WhatsApp group
Reviews and testimonials	Google, Facebook and Tripadvisor reviews
Organic shares	People reshare your funny reel without being paid
Unpaid creator buzz	A creator mentions your shop because they genuinely like it
SEO and backlinks	Other websites link to yours, which helps your Google ranking

Strengths: trust, credibility, social proof, free amplification. **Limit:** you can influence it (great service, great content, PR) but not control it.

How they work together (example): a hotel runs Meta ads (paid) to promote a winter offer. People land on the hotel's website and sign up to its newsletter (owned). Guests post photos and leave 5-star reviews (earned), which the hotel then features in its next ads (paid) and on its website (owned).

SECTION 8

The channels and tools of the ecosystem

The "digital marketing ecosystem" is the set of channels, platforms and tools a brand uses, and the way they connect. The website and the data sit in the middle: almost every channel sends people there, and the analytics tell you what worked.

The digital marketing ecosystem

Every channel connects back to your website and your data

The main channels in one page

Channel	What it is	Best for	Week
Website	Your own site or online shop	Converting visitors; the base for every other channel	2
SEO	Ranking for free in Google results and Maps	Long-term, low-cost visitors with intent	3
Content marketing	Useful articles, videos and guides	Trust, SEO and social posts	4
Social media (organic)	Your posts and community on Facebook, Instagram, TikTok, LinkedIn	Awareness, engagement, community	5
Paid search (Google Ads)	Ads shown to people searching on Google	Capturing demand that already exists	6–7
Paid social (Meta ads)	Ads on Facebook, Instagram and Messenger	Creating demand, precise targeting	8
Display, video and programmatic	Banners and video ads across websites, apps and YouTube	Awareness and retargeting	9
Email and CRM	Newsletters and automated messages to your contacts	Loyalty, repeat sales, nurturing leads	10
Messaging (WhatsApp, Messenger)	One-to-one conversations, often for orders and support	Conversion and service (very strong in Mauritius)	10, 15
Influencer marketing	Creators who recommend your brand	Reach and trust with a specific community	5, 9
Analytics	GA4, Search Console, platform reports	Measuring what works and improving it	2, 11

The digital marketer's toolbox

The tools you will use during this programme (most have a free version)

How the ecosystem connects

1. A person sees your **Instagram ad** (paid) or your **post** (owned) or a **creator's review** (earned).
2. They click and land on your **website**, where **Google Tag Manager** fires the tracking tags.
3. **Google Analytics 4** records the visit, the source (Instagram) and what they did (viewed a product, filled a form).
4. They leave their email or WhatsApp number: they enter your **CRM**, which sends automated follow-ups.
5. Later they search your brand on Google: your **SEO** and **Google Business Profile** reassure them; they buy.
6. You see the full path in your reports and move budget to the channels that bring customers, not just clicks.

In Mauritius: many small businesses run everything from a Facebook page and WhatsApp. That works to start, but it means no owned data and full dependence on one platform. Adding a simple website, a Google Business Profile and an email or WhatsApp list builds assets the business owns.

PART D

Objectives & KPIs

Set the right goals,
then measure what matters

Business objectives come first

The most common beginner mistake is to start with tactics: "let's do TikTok", "let's boost a post". **Marketing objectives must come from business goals**, never from a list of channels.

Business goal first, channels last

The alignment flow every marketing plan follows

The business objective menu

Business objective	What it means	Mauritian example
Grow revenue	More sales and higher turnover	A supermarket chain grows online grocery orders
Increase market share	Win customers from competitors	A telecom operator wins fibre subscribers
Generate qualified leads	Feed the sales team with real prospects	A real estate agency collects buyer enquiries
Launch a new product	Awareness, trial and early adopters	A bank launches a new mobile app feature
Improve profitability	Better margins, lower cost per customer	A hotel shifts bookings from agencies to direct bookings
Retention and loyalty	Repeat purchases and lifetime value	A fashion brand grows its loyalty club
Defend market position	Protect share from new entrants	A leading retailer responds to a new competitor
Awareness in a new category	Educate a market about something new	A startup introduces solar panel subscriptions

The rule: channels are not objectives. Start with the business goal, then set the marketing objective, then choose the channels, then the KPIs.

SECTION 10

Objectives and market position

The right objective depends on where the business is today, not on what worked last year or what a big competitor is doing.

Objectives depend on market position

Where the business is today decides what marketing should do

Stage	Priority objectives	Reality check
New / emerging	Brand awareness, demand generation, lead generation, trial, first customers	Chasing market share without enough investment usually fails. Phase the ambition.
Growing	Scale qualified demand, improve conversion efficiency, grow share, drive repeat purchase, expand to new segments	Efficiency matters as much as volume: cost per acquisition and conversion rate become central.
Mature / leading	Retention, profitability, customer lifetime value, premium positioning, defending share	The biggest threat is complacency: loyalty needs investment too.

SECTION 11

SMART objectives

A vague ambition can't be managed. The **SMART** framework turns it into an objective you can plan, track and achieve.

SMART objectives

Five questions every objective must answer

Common mistakes

Mistake	Example	Why it fails
Confusing tactics with objectives	"Post on social media every day"	It's an activity, not a result
Unrealistic goals	"Double sales next month with no budget"	Ambition without resources
Wrong fit for market position	A new brand copying a market leader's loyalty programme	The business needs awareness first
No metric or deadline	"Improve our image"	Without a number and a date, it's a wish

From vague to SMART

Vague	SMART
"Do more social media."	Increase qualified website traffic from social campaigns by 25% within 6 months.
"Get more customers."	Generate 300 qualified leads per quarter and convert 10% into first-time customers.
"Gain market share fast."	Increase aided brand awareness by 15% and acquire 500 first-time customers in the next 9 months.
"Improve customer loyalty."	Lift the repeat purchase rate from 22% to 30% among existing customers within 12 months.

Practice: make these SMART

1. A restaurant in Grand Baie: "We want more bookings."
2. An online clothing shop: "We need more followers."
3. An accounting firm in Ebène: "We want to be better known."

Possible answers: (1) Increase online table bookings from 40 to 60 per week by 31 March, using Google Business Profile and Instagram. (2) Grow Instagram followers from Mauritius from 2,000 to 3,500 in 4 months, while keeping an engagement rate above 3%. (3) Generate 40 qualified enquiries from SMEs through LinkedIn and the website within 6 months.

SECTION 12

KPIs: measuring what matters

A **KPI (Key Performance Indicator)** is a measurable value that shows whether a marketing activity is succeeding against its objective. If a number doesn't tell you whether you are moving towards the objective, it's not a KPI: it's noise.

Don't confuse these three

Term	Meaning	Example
Tactic	What you do	Run a Meta ads campaign
Activity metric	What you produced	15 posts published, 3 ads live
KPI	What it delivered against the objective	Cost per lead, conversion rate, qualified leads

KPIs must match the objective

Objective	Primary KPIs
Awareness	Impressions, reach, CTR, increase in brand searches
Traffic / engagement	CTR, CPC, sessions, engagement rate
Lead generation / conversion	Conversion rate (CVR), cost per acquisition (CPA), cost per lead, lead quality
Revenue / profitability	ROAS, CPA, lifetime value (LTV), margin contribution
Retention / loyalty	Repeat purchase rate, LTV, churn rate, Net Promoter Score (NPS)

Beware of vanity metrics. Likes, followers and impressions feel good but don't pay salaries. They matter only if they connect to the objective. Always pick the KPIs **after** setting the objective, never the other way round.

SECTION 13

KPI formulas and the maths

Seven formulas every digital marketer should know by heart. You will use them every week of this programme.

The 7 core KPI formulas

Know them by heart

IMPRESSIONS Exposure Number of times shown Volume, not quality	CTR Click-through rate $\text{Clicks} \div \text{Impressions} \times 100$ Is the ad relevant?	CPC Cost per click $\text{Spend} \div \text{Clicks}$ Cost of traffic	CVR Conversion rate $\text{Conversions} \div \text{Clicks} \times 100$ Does the page convert?
CPA Cost per acquisition $\text{Spend} \div \text{Conversions}$ Cost of one customer	ROAS Return on ad spend $\text{Revenue} \div \text{Ad spend}$ Rs earned per Rs 1 spent	LTV Lifetime value $\text{Avg order} \times \text{Frequency} \times \text{Lifespan}$ Long-term customer worth	Pro tip Pair an efficiency KPI (CPA) with a value KPI (LTV): cheap customers who never return are not a success.

Worked example 1: a Facebook ad for a local shop

Data	Value
Ad spend	Rs 10,000
People who clicked	1,000
People who bought	25
Price of one sale	Rs 800

- **CPC** = $\text{Rs } 10,000 \div 1,000 \text{ clicks} = \text{Rs } 10 \text{ per click}$
- **Conversion rate** = $25 \div 1,000 \times 100 = 2.5\%$
- **CPA** = $\text{Rs } 10,000 \div 25 = \text{Rs } 400 \text{ per customer}$

- **Revenue** = $25 \times \text{Rs } 800 = \text{Rs } 20,000$, so **ROAS** = $\text{Rs } 20,000 \div \text{Rs } 10,000 = 2$ (Rs 2 earned for every Rs 1 spent)

Was it worth it? Revenue is not profit. If the shop's product costs Rs 450 per sale, the gross profit is $25 \times (800 - 450) = \text{Rs } 8,750$, which is **less** than the Rs 10,000 ad spend. The campaign lost money on the first purchase, unless these customers come back (LTV). This is why ROAS must be compared with your margins.

Worked example 2: from impressions to sales

A Google Ads campaign for a car rental company shows ads 50,000 times. 1,500 people click, the campaign costs Rs 30,000, and 45 people book, for total revenue of Rs 135,000.

KPI	Calculation	Result
CTR	$1,500 \div 50,000 \times 100$	3%
CPC	$\text{Rs } 30,000 \div 1,500$	Rs 20
CVR	$45 \div 1,500 \times 100$	3%
CPA	$\text{Rs } 30,000 \div 45$	Rs 667
ROAS	$\text{Rs } 135,000 \div \text{Rs } 30,000$	4.5

Worked example 3: lifetime value

A café customer spends on average Rs 250 per visit, comes 6 times a month, and stays a customer for about 2 years (24 months).

LTV = $\text{Rs } 250 \times 6 \times 24 = \text{Rs } 36,000$. Spending Rs 300 in ads to win one such customer is a good deal; the same Rs 300 for a one-time tourist who spends Rs 250 is not.

Practice questions (answers below)

1. An Instagram ad was shown 20,000 times and got 400 clicks. What is the CTR?
2. You spent Rs 6,000 for 300 clicks. What is the CPC?
3. 300 clicks brought 12 sales. What is the conversion rate?
4. You spent Rs 6,000 and earned Rs 18,000. What is the ROAS?
5. You spent Rs 6,000 and got 12 customers. What is the CPA?

Answers: 1) 2% · 2) Rs 20 · 3) 4% · 4) 3 · 5) Rs 500

PART E

Practice

Exercises, glossary
and checklist

SECTION 14

Exercises

These exercises match the workshop in class. Work on a real Mauritian brand you know, and submit your work on the learning platform (Module 1 exercises).

Exercise 1: explore a brand online

Choose a brand you use or see often:

Sector	Brands
Telecom	Emtel, my.t
Banking	MCB, ABSA Mauritius, SBM
Retail	Winner's, Intermart, Courts Mammouth
Hospitality	Beachcomber, Sunlife, Constance Hotels
Fashion	Island Haze, Cottons
Automotive	Leal Group
Real estate	Park Lane Properties

Checklist: what to look for (write "nothing found" if it doesn't exist)

- ☐ **Website:** open it on your phone. Is it fast? Easy to find things?
- ☐ **Facebook / Instagram:** what do they post, how often, do people comment?
- ☐ **TikTok / YouTube:** do they make videos? Entertaining or helpful?
- ☐ **Google Search:** search the brand name. What comes up first?
- ☐ **Email / WhatsApp:** have they ever messaged you? About what?
- ☐ **Customer reviews:** what do customers say on Google or Facebook?
- ☐ **Mobile app:** do they have one? Is it useful?
- ☐ **Ads:** have you seen their ads online? Where?
- ☐ **Influencers:** do local creators talk about the brand?

Then classify everything you found as **paid**, **owned** or **earned** media, and place it on the consumer journey (awareness, consideration, conversion, loyalty).

Exercise 2: how good is their online presence?

- Does the website look good, load fast and work on a phone?
- Is the branding clear and the same on every platform (logo, colours, style)?
- Do people interact (likes, comments, shares)?
- Can you find them on the first page of Google?
- Do they run ads on Facebook, Instagram or YouTube?
- Is customer support easy (WhatsApp, Messenger, chatbot)?
- Do they use anything creative (AI chatbot, AR filter, original campaign)?

Scorecard: rate from 1 (poor) to 5 (excellent)

Category	Score
Social media	/5
Website	/5
Look and feel (branding)	/5
Customer interaction	/5
Easy to find on Google	/5
Total	/25

Exercise 3: the key numbers

Using Section 13, explain in your own words what CTR, CPC, reach, engagement rate, conversion rate, ROAS, follower growth and bounce rate tell a marketer. Then solve the practice questions at the end of Section 13 without looking at the answers.

Your Module 1 deliverables on the platform: Exercise 1.1 (Digital Ecosystem Mapping) and Exercise 1.2 (Platform Exploration), plus the Module 1 revision quiz. Use this guide and the presentation to prepare.

SECTION 15

Glossary and checklist

Term	Meaning
Marketing mix (4 Ps)	Product, Price, Place, Promotion; 7 Ps adds People, Process, Physical evidence
Digital marketing	Marketing through online channels: measurable, targeted and adaptable
Consumer journey	The stages from discovering a brand to buying and staying loyal
Paid media	Media you pay for: ads, sponsored posts
Owned media	Channels you control: website, email list, app, social pages
Earned media	Visibility you earn: reviews, press, shares, word of mouth
First-party data	Information customers give you directly (emails, purchases, preferences)
CRM	Customer relationship management: software that stores and uses customer data
SEO / SEA	Search engine optimisation (free results) / search engine advertising (paid results)
Programmatic	Automated buying of ad space across many websites and apps
SMART	Specific, Measurable, Achievable, Relevant, Time-bound
KPI	Key performance indicator: a number that shows progress towards an objective
Vanity metric	A number that looks good but doesn't show business results
Impressions / Reach	Times an ad was shown / number of different people who saw it
CTR	Click-through rate = $\text{clicks} \div \text{impressions} \times 100$
CPC	Cost per click = $\text{spend} \div \text{clicks}$
CVR	Conversion rate = $\text{conversions} \div \text{clicks} \times 100$

Term	Meaning
CPA	Cost per acquisition = $\text{spend} \div \text{conversions}$
ROAS	Return on ad spend = $\text{revenue} \div \text{ad spend}$
LTV	Lifetime value = $\text{average order} \times \text{purchase frequency} \times \text{customer lifespan}$
Engagement rate	Interactions (likes, comments, shares) as a share of people reached
Bounce rate	Share of visitors who leave the website without doing anything
Churn rate	Share of customers who stop buying in a period
NPS	Net Promoter Score: how likely customers are to recommend you

Module 1 checklist

- ☐ I can explain marketing, the 4 Ps and the difference between traditional and digital marketing
- ☐ I know the key figures of the Mauritian digital market and what they mean
- ☐ I can describe the four stages of the consumer journey and the channels for each
- ☐ I can classify any channel as paid, owned or earned
- ☐ I can turn a vague goal into a SMART objective linked to a business goal
- ☐ I can choose KPIs that match an objective
- ☐ I can calculate CTR, CPC, CVR, CPA, ROAS and LTV
- ☐ I have completed the brand exploration and scorecard exercises
